

LITHIUM BATTERY CAN/BLUETOOTH CONNECTIVITY

Press release

The CAN + BT lithium battery: technology at the best price

ACE Energy intends to give a boost to the electric mobility of recreational and service vehicles by finally making them affordable. Our Lithium Iron Phosphate CAN/BT communicating batteries of 12.8V - 100Ah (and soon 150Ah from the 1st quarter 2021) will cost less than €800 +VAT. A price that beats all competition... but without cutting back on quality!

Our batteries have some serious benefits: long lasting (up to 4,000 cycles at 0.2C charge and discharge), appreciable autonomy with twice the power of a lead battery, can work between -20°C and +60°C, are 40% lighter than acid or gel batteries, are safe and maintenance-free... Equipped with CAN/Bluetooth communication, they provide access to a lot of status information via a mobile application available for iOS or Android.
